Objective / Problem Statement

Goal:

To analyze Blink IT's customer, delivery, inventory, and marketing data using Power BI, and generate actionable insights that can improve customer experience, delivery performance, inventory management, and campaign effectiveness.

Key Objectives:

- Identify loyal customers and analyze order patterns
- Measure delivery delays and performance
- Track product demand and stock levels
- Evaluate marketing campaigns based on ROAS
- Understand customer feedback and satisfaction
- Forecast future inventory needs

Dataset Overview

Dataset Name: Blinkit Sales Dataset

Source: Kaggle : <https://www.kaggle.com/datasets/akxiit/blinkit-sales-dataset>

1. blinkit_customer_feedback.csv

- Shape: 5,000 rows × 3 columns
- Key Columns:
 - Customer_id
 - feedback_category
 - feedback_text
- Used for: Analyzing customer complaints & satisfaction

2. blinkit_customers.csv

- Shape: 10,000 rows × 5 columns
- Key Columns:
 - customer_id
 - customer_name
 - address, phone, email
- Used for: Customer segmentation, location-based trends

3. blinkit_delivery_performance.csv

- Shape: 15,000 rows × 4 columns
- Key Columns:
 - order_id
 - delivery_time_minutes
 - delivery_delay_minutes
 - delivery_status
- Used for: Measuring delivery efficiency and delay.

4. blinkit_inventory.csv

- Shape: 1,500 rows × 4 columns
- Key Columns:
 - product_id
 - stock_received
 - month, year
- Used for: Stock movement over time

5. blinkit_inventoryNew.csv

- Shape: 1,500 rows × 5 columns
- Key Columns:
 - product_id
 - damaged_percentage
- Used for: Analyzing damaged stock rates

6. blinkit_marketing_performance.csv

- Shape: 300 rows × 6 columns
- Key Columns:
 - campaign_id, campaign_name
 - spend, revenue_generated, ROAS
- Used for: Evaluating campaign effectiveness

7. blinkit_order_items.csv

- Shape: 50,000 rows × 4 columns
- Key Columns:
 - order_id, product_id
 - quantity, price
- Used for: Product-level sales analysis

8. blinkit_orders.csv

- Shape: 20,000 rows × 5 columns
- Key Columns:
 - order_id, customer_id
 - order_date, store_id, delivery_status
- Used for: Order volume and trends

9. blinkit_products.csv

- Shape: 1,000 rows × 5 columns
- Key Columns:
 - product_id, product_name
 - category, price, discount_percentage
- Used for: Product and pricing analytics

10. Category_Icons.xlsx

- Shape: ~20 rows × 2 columns
- Key Columns:
 - category, icon_url
- Used for: Dashboard visuals and category mapping

11. Rating_Icon.xlsx

- Shape: 5 rows × 3 columns
 - Key Columns:
 - Rating, Emoji, Star
 - Used for: Dashboard visuals and rating mapping
- Used for: Dashboard visuals and rating mapping

Tools Used

- **Power BI** – For data visualization, dashboard creation, and insights extraction
- **GitHub** – For storing the project files, datasets, and report

Methodology

- **Data Preprocessing:**

The dataset from Kaggle was already well-structured and cleaned. No major missing values or outliers were found during initial inspection. Basic validation was done to ensure consistency across files (e.g., matching product_id, order_id, and customer_id across tables).

- **Visualization Process:**

Power BI was used to create interactive dashboards and visualizations including:

- Bar Charts for order counts, product sales, and feedback distribution
- Line Charts and Time Series for monthly trends and stock forecasts
- Donut Charts for customer segments and feedback categories
- KPI Cards to highlight revenue, customer retention, and order value
- Funnel Charts and Decomposition Trees to track campaign performance and segment insights

Slide 7: Key Findings

Top insights gathered from the Power BI analysis of BlinkIT's datasets:

1. Peak Order Months Identified

Highest order volumes were recorded in **August 2023** and **May 2023**, indicating seasonal demand spikes.

2. Delivery Performance is Strong but Needs Improvement

Over **70% of deliveries are on time**, but around **30% experience delays**, mostly slight — suggesting opportunities in route or slot optimization.

3. High-Damage Products Detected

Products like **Toilet Cleaner** and **Detergent** have damage rates over **20%**, indicating issues in **packaging** or **transport**.

4. Marketing Campaign ROI is Uneven

Campaigns like **Referral Programs** and **Festival Offers** show high ROAS (~3.9+), while others perform poorly — suggesting a need for **budget reallocation**.

5. High-Value Customers Identified

Some customers, like *Aadhya Cherian*, have **CLV above ₹28,000**, highlighting potential for **premium segmentation and retention strategies**.

1. Number of Orders Placed per Customer

Purpose:

To display which customers have placed the highest number of orders.

Visual:

Horizontal bar chart (X-axis: order count, Y-axis: customer names)

Insights:

- **Nidhi Sha** has the highest orders (9).
- Multiple customers have 7–8 orders, showing repeat buying behavior.
- Useful to target loyal customers with offers and retention campaigns.

2. Total Number of Orders Placed in a Month

Purpose:

To track order volume trends by month.

Visual:

Vertical bar chart (X-axis: Month-Year, Y-axis: total orders)

Insights:

- Peak orders in August 2023 (285) and May 2023 (276).
- Order volume stays consistent month to month.
- Helps plan campaigns, manpower, and stock for busy periods.

3. Distribution of Feedback Categories

Purpose:

To understand which areas customers give the most feedback about.

Visual:

Pie chart with slices for Delivery, Customer Service, Product Quality, App Experience.

Insights:

- Feedback is evenly spread across all 4 categories (~24–25% each).
- No single area dominates, so multiple teams need to improve together.
- Confirms the need for holistic service improvement.

Distribution of Feedback Categories

4. Customer Details

Purpose:
To view basic details about individual customers.

Visual:
Table with customer ID, name, and address.

- Insights:**
- Supports address validation for deliveries.
 - Useful for store or zone-level order tracking.
 - Can be used for personalized service and communication.

Customer Details		
customer_id	customer_name	address
31813	Indrajit Pau	66, Vora Chowk Maheshtala 376030
31826	Ekiya Pau	H.No. 336 Lad Zila, Hajipur-409871
61020	Onkar Suresh	88/40, Bora Zila, Phusro-1615
75482	Jeet Gandhi	95/861, Jaggi, Sikar-343285
119099	Zansi Parsa	H.No. 40, Gopal Ganj, Bidar 8
188838	Idika Basu	67, Karan Chowk Katihar 496332
191616	Brijesh Tata	19/151, Bera Nagar, Surendra
211163	Hiral Baral	H.No. 11 Sharma Chowk, Jhansi-30259

5. Orders Based on Delivery Status

Purpose:

To show how many orders were on time, slightly delayed, or significantly delayed.

Visual:

Vertical bar chart (X-axis: Delivery Status, Y-axis: order count)

Insights:

- 3.5K orders delivered on time, 1K slightly delayed, 0.5K significantly delayed.
- Over 70% orders meet delivery promises.
- Highlights where process improvements can cut delays further.

6. Average Order Value (AOV)

Purpose:

To show the average value of each customer's order across all transactions.

Visual:

KPI Card displaying **1.31K** (currency implied)

Insights:

- Indicates that each order brings in about **1,310** units of currency.
- Helpful for tracking customer spending behavior.
- Can be used to plan upselling or bundled offers to increase basket size.

7. Total Revenue from Campaigns

Purpose:

To display the total revenue generated from all marketing campaigns combined.

Visual:

KPI Card showing **32.19M** total revenue.

Insights:

- Highlights the overall contribution of advertising to sales.
- Shows the effectiveness of the App Push Notification strategy.
- Helps marketing managers justify ad spend and ROI.

8. Order Quantity per Product

Purpose:

To see which products sell the most by volume.

Visual:

Horizontal bar chart by product and quantity.

Insights:

- Pet Treats, Dish Soap lead in quantity sold.
- Guides restocking priorities.
- Shows top revenue drivers.

9. Percentage of Damaged Stocks Per Product

Purpose:

To detect which products have high damage rates.

Visual:

Table with product name, ID, and damage percentage.

Insights:

- Toilet Cleaner, Detergent are high risk.
- Fix packaging to reduce waste.
- Protects profit margins.

Percentage of Damaged Stocks Per Product		
product_name	product_id	Average of Damaged_Percentage
Toilet Cleaner	604184	20.96
Toilet Cleaner	697683	19.18
Detergent	589812	17.77
Toilet Cleaner	677542	17.33
Pulses	317242	15.39
Pulses	876139	13.79
Lotion	124290	13.73
Pet Treats	120385	13.44
Rice	760684	13.23
Pulses	354409	12.86
Dish Soap	700048	12.55
Wheat Flour	120532	12.35
Sugar	400602	12.22
Total		9.22

10. Campaign Table

Purpose:

To list and compare individual marketing campaigns by spend and revenue.

Visual:

Table with columns: campaign_id, campaign_name, Sum of spend, Sum of revenue_generated

Insights:

- Shows spend ranges from ~1K to ~5K per campaign.
- Revenue generated is higher than spend for most campaigns.
- Provides a clear ROI view for each campaign, enabling better budget allocation.

Table with all Campaigns			
campaign_id	campaign_name	Sum of spend	Sum of revenue_generated
3645	App Push Notification	4,888.62	7441.19
3883	App Push Notification	2,012.46	3227.28
5729	App Push Notification	3,726.59	9818.50
7705	App Push Notification	2,248.38	3033.39
7847	App Push Notification	1,163.12	3696.71
8328	App Push Notification	3,964.61	7024.84
8397	App Push Notification	1,445.99	5592.02
10502	App Push Notification	3,543.62	9807.18
10707	App Push Notification	2,882.64	3331.15
13677	App Push Notification	3,873.04	5814.04
Total		1,63,19,838.24	32193407.37

11. Stock Received Over Time

Purpose:

To track how much stock is received each month.

Visual:

Line and column chart by month and product.

Insights:

- Stock peaks in Oct–Dec.
- Helps with demand forecasting.
- Ensures stock levels match sales needs.

12. Total Sales Revenue per Product

Purpose:

To display which products generate the highest total revenue.

Visual:

Vertical bar chart (X-axis: Product with ID, Y-axis: Total Sales Revenue)

Insights:

- **Baby Food** and **Baby Wipes** are top revenue drivers.
- Bananas and Biscuits also contribute significant sales.
- Helps managers focus promotions and stock planning on profitable items.

13. Total Delivery Time

Purpose:

To show the delivery time (in minutes) for each order.

Visual:

Table with columns: `order_id` and `Sum of delivery_time_minutes`.

Insights:

- Most deliveries fall within **3–15 minutes**.
- Some negative or zero values indicate data entry errors.
- Useful for monitoring delivery speed and cleaning bad data.

Total Delivery Time	
order_id	Sum of delivery_time_minutes
60465	5
2237858	3
3101265	3
5120698	15
5512907	15
7550508	-1
8701796	9
9408428	-4
10161194	3
10448052	5
11467999	14
14103943	11
15642223	3
Total	22215

14. Customer Segment

Purpose:

To show the proportion of customers in each segment.

Visual:

Pie chart with segments: Regular, Premium, New, Inactive.

Insights:

- Segments are evenly spread (24–25% each).
- Indicates a balanced mix of loyal, new, and inactive customers.
- Helps tailor offers to re-engage inactive users.

15. Order Frequency by Pin code

Purpose:

To visualize where orders are coming from geographically.

Visual:

Map with pin markers for order locations by pincode.

Insights:

- Clusters show dense order activity in key states.
- Helps optimize delivery hubs and expansion plans.
- Useful for region-wise marketing.

16. Delivery Delays

Purpose:

To display delivery delays for each order.

Visual:

Table with `order_id` and `Delivery Delay (mins)`.

Insights:

- Most delays are under 15 mins.
- Some negative values highlight possible data corrections needed.
- Supports logistics performance tracking.

Delivery Delays	
order_id	Delivery Delay (in mins)
60465	5
2237858	3
3101265	3
5120698	15
5512907	15
7550508	-1
8701796	9
9408428	-4
10161194	3
10448052	5
11467999	14
14103943	11
15642223	3

17. Distance vs Delivery Time

Purpose:

To show how delivery time changes with distance.

Visual:

Scatter plot (X-axis: Distance KM, Y-axis: Average Delivery Time) with color by delivery status.

Insights:

- Slight upward trend — longer distance means longer time.
- On Time, Slightly Delayed, and Significantly Delayed are clearly distinguished.
- Helps optimize routes for faster delivery.

18. Return on Ad Spend (ROAS)

Purpose:

To measure the effectiveness of each marketing campaign based on return on ad spend.

Visual:

Table showing campaign_id, campaign_name, spend, revenue generated, and ROAS.

Insights:

- Highest ROAS: New User Discount (3.77), Festival Offer (3.45), Referral Program (3.19).
- Most campaigns generate more than they cost.
- Critical for reallocating marketing budget toward high-performing campaigns.

Return on Ad Spend (ROAS)				
campaign_id	campaign_name	Sum of spend	Sum of revenue_generated	ROAS
499454	Weekend Special	4,534.40	9999.54	1.60
86830	Festival Offer	4,608.58	9997.70	3.11
583577	Festival Offer	1,690.70	9992.76	3.45
503991	Weekend Special	3,057.43	9989.43	2.35
896959	Referral Program	3,132.83	9986.03	3.97
836950	New User Discount	4,383.95	9985.75	3.77
702001	Festival Offer	3,766.66	9983.15	3.35
480269	Category Promotion	4,772.71	9982.95	1.93
164441	Category Promotion	4,098.68	9981.75	2.45
255650	Category Promotion	2,303.66	9979.12	3.27
258348	Membership Drive	3,977.27	9975.81	3.73
Total		1,63,19,838.24	32193407.37	

19. Gross Profit by Product

Purpose:

To show which products generate the highest gross profit.

Visual:

Table with product_id, product_name, and gross profit amount.

Insights:

- Top product: Mangoes (₹14,116), followed by Dish Soap, Spinach, and Cheese.
- Baby Wipes and Baby Food are also profitable.
- Helps focus on stocking and marketing high-profit items.

Gross Profit

product_id	product_name	Gross Profit
4452	Baby Wipes	1,987.60
6405	Baby Food	2,412.40
9436	Toothpaste	1,361.82
11422	Potatoes	858.33
14145	Spinach	6,308.40
15314	Cheese	3,704.64
18035	Dish Soap	11,627.28
26060	Vitamins	2,812.11
33797	Pain Reliever	1,598.62
33955	Frozen Pizza	2,530.69
34186	Mangoes	14,116.16
Total		13,61,602.88

20. Forecast for Future Stock Level

Purpose:

To predict future stock levels using past trends.

Visual:

Line chart with shaded area for forecasted values (2023–2026).

Insights:

- Stock is projected to drop sharply after 2024.
- May lead to stockouts if no procurement plan is in place.
- Calls for proactive inventory planning for 2025–2026.

21. Customer Details

Purpose:

To provide customer-specific information such as ID, name, phone number, and email for operational or marketing reference.

Visual:

Detailed table with columns: customer_id, customer_name, phone, email.

Insights:

- Supports personalized communication and marketing campaigns.
- Useful for customer service tracking, re-engagement, and segment-based targeting.
- Can be used to identify frequent or VIP customers for loyalty programs.

Customer Details			
customer_id	customer_name	phone	email
80315623	Varenya Banik	+910978849959	aachalsarn
70230254	Hamsini Sandhu	+916745836473	aachalshet
14161586	Aachal Nazareth	+919346916511	aadhya71@
61226563	Chameli Kala	+910657229569	aadhya91@
74735607	Naksh Amble	+919974502354	aadhyabha
71615827	Yash Contractor	+919513823264	aadi81@e

43459807	Charan Brahmbhatt	+911379152726	aahanatail
51661209	Vasana Chandran	+911574680957	aaravdave
67749649	Oviya Mitra	+919890802849	aaravduga
60275891	Anmol Chandra	+918902750394	aaravgala@
50630016	Max Ranganathan	+917735360816	aaravkhosl
33034249	Lavanva Hari	+911138185119	aarini44@

22. Customer Retention Rate

Purpose: To show how many customers return for repeat purchases.

Visual: KPI card showing “94.20” as the retention percentage.

Insights:

- High retention rate (94.2%) indicates strong customer satisfaction.
- Reflects effective engagement and loyalty management.

23. Most Ordered Product

Purpose: To highlight the product with the highest number of total orders.

Visual: Highlight card labeled “Baby Food – Most Ordered Product”.

Insights:

- Baby Food is the most frequently purchased item.
- Suggests high demand and essential inventory priority.

24. Delivery Status Filter

Purpose: To filter order-level delivery records based on timeliness.

Visual: Slicer box with four options: On Time, Slightly Delayed, Significantly Delayed, Select All.

Insights:

- Enables focused analysis of delays for operational efficiency.
- Helpful in reviewing logistics team performance and root-cause analysis.
- Allows dynamic visual filtering across the entire dashboard.

25. Daily Order Count

Purpose:

To track the number of orders placed each day.

Visual:

Line chart (X-axis: Day, Month, Year; Y-axis: Order Count)

Insights:

- Order volume fluctuates daily but stays within a stable range.
- Peaks help plan daily staffing and delivery slots.
- Identifies any sudden drop-offs needing action.

26. Order Quantity per Product Category

Purpose:

To show which product categories have the highest total orders.

Visual:

Table with categories and total quantity ordered.

Insights:

- **Household Care, Pet Care, and Pharmacy** lead in quantity.
- Snacks & Munchies show good demand too.
- Helps plan category promotions and restocking priorities.

Order Quantity per Product Category	
category	Total Quantity Ordered
Snacks & Munchies	963
Popcorn	183
Nuts	134
Cookies	97
Chocolates	131
Chips	171
Biscuits	247
Pharmacy	973
Pet Care	1003
Personal Care	887
Instant & Frozen Food	742
Household Care	1078
Grocery & Staples	895
Total	10034

27. Stock Levels Alert

Purpose:
To identify products that have hit low stock levels.

Visual:
Table listing product names, IDs, and low stock flags.

- Insights:**
- All listed items are flagged **HIGH** for low stock.
 - Mostly **Baby Food** and **Baby Wipes** — high turnover products.
 - Supports timely reordering to avoid stockouts.

Stock Levels Alert			
product_name	product_id	min_stock_level	Low_Stock_F
Baby Food	6405	11	HIGH
Baby Food	953175	11	HIGH
Baby Food	51036	12	HIGH
Baby Food	82484	12	HIGH
Baby Food	930284	20	HIGH
Baby Food	57405	21	HIGH
Baby Wipes	440875	15	HIGH
Baby Wipes	927651	15	HIGH
Baby Wipes	432617	17	HIGH
Baby Wipes	367391	18	HIGH
Baby Wipes	853932	21	HIGH
Baby Wipes	784827	26	HIGH
Total			HIGH

28. Customer Lifetime Value (CLV)

Purpose:

To display the total lifetime value of each customer.

Visual:

Table with customer names and CLV.

Insights:

- Customers like *Aadhya Cherian* and *Aadhya Palla* have very high CLV.
- Shows who contributes the most to revenue long-term.
- Useful for loyalty programs and retention marketing.

Customer Lifetime Value

customer_name	CLV
Aachal Mangat	9,161.61
Aachal Nazareth	3,893.67
Aadhya Cherian	28,920.00
Aadhya Padmanabhan	6,469.58
Aadhya Palla	14,800.59
Aadhya Ravi	1,838.87
Aadi Bains	721.13
Aadi Gole	1,470.72
Aahana Buch	3,159.99
Aahana Gopal	5,915.50
Aahana Menon	16,596.63
Aahana Naik	1,966.72
Aarav Andra	9,152.70

29. Campaign Conversion Process

Purpose:

To show how impressions convert to clicks and then to conversions.

Visual:

Funnel or bar chart with average impressions, clicks, and conversions.

Insights:

- Starts at **5.46K impressions**, drops to **0.55K clicks**, then **0.06K conversions**.
- Reveals a ~1% conversion rate.
- Helps refine targeting and ad creative.

Campaign Conversion Process

30. Orders Trends Across Category

Purpose:

To compare order trends and average order value by category.

Visual:

Dual line chart — one for orders trend, one for average order value.

Insights:

- Baby Care, Snacks, and Cold Drinks see steady demand.
- Average order value varies across categories.
- Supports tailored promotions for different product lines.

31. Customer Orders by Store ID

Purpose:

To see which customer bought which product, from which store, and when.

Visual:

Table with `customer_name`, `product_name`, `order_id`, `store_id`, and `order_date`.

Insights:

- Helps map order activity to specific stores.
- Tracks which products are popular at different locations.
- Supports store-level inventory and service planning.

Customer Orders by Store_ID				
customer_name	product_name	order_id	store_id	order_date
Aachal Mangat	Frozen Biryani	3211566084	8701	24-02-2024
Aachal Nazareth	Baby Food	1524480475	3502	23-06-2024
Aachal Nazareth	Dish Soap	8126970833	8350	14-09-2024
Aadhya Cherian	Pain Reliever	9260334793	534	10-07-2024
Aadhya Cherian	Bread	3262295808	7348	19-04-2024
Aadhya Padmanabhan	Potatoes	4219458877	4216	27-12-2023
Aadhya Palla	Baby Food	5161988291	6154	01-07-2024
Aadhya Palla	Popcorn	6033660622	6157	12-04-2023
Aadhya Ravi	Wheat Flour	4867173151	2590	24-10-2023
Aadhya Ravi	Dish Soap	1975300826	3702	25-09-2024
Aadi Raine	Baby Wipes	7571818625	310	28-06-2023

32. Order Density per Area

Purpose:

To visualize where most orders are placed geographically.

Visual:

Map with pins showing order concentration.

Insights:

- High density in major cities and states.
- Useful for optimizing delivery zones.
- Helps plan regional marketing or new hub locations.

33. Product-Wise Discount Percentages

Purpose:

To display how much discount is applied to each product.

Visual:

Table with `product_name` and `Discount_Percentage`.

Insights:

- Highest discounts on **Cat Food**, **Biscuits**, and **Baby Food** (~30–35%).
- Average discount ~28%.
- Supports pricing strategy and promotion planning.

Product-Wise Discount Percentages

product_name	Discount_Percentage
Baby Food	30.00

34. Delivery Status of Orders

Purpose:

To show the status of delivery for each product and order.

Visual:

Table with `order_id`, `product_name`, and `delivery_status`.

Insights:

- Most items marked **On Time**.
- Frozen Pizza, Cheese, and Toilet Cleaner show slight delays.
- Monitors delivery performance by product.

Delivery Status of Orders		
order_id	product_name	delivery_status
60465	Biscuits	✓ On Time
2237858	Pet Treats	✓ On Time
3101265	Cola	✓ On Time
5120698	Frozen Pizza	⚠ Slightly Delayed
5512907	Cheese	⚠ Slightly Delayed
7550508	Shampoo	✓ On Time
8701796	Toothpaste	⚠ Slightly Delayed
9408428	Lotion	✓ On Time
10161194	Butter	✓ On Time
10448052	Pulses	✓ On Time
11467999	Toilet Cleaner	⚠ Slightly Delayed
14103943	Cola	⚠ Slightly Delayed
15642223	Wheat Flour	✓ On Time
16878685	Baby Wipes	✓ On Time

35. Top N Campaigns with Highest ROAS

Purpose:

To highlight marketing campaigns that deliver the best return on ad spend.

Visual:

Column chart showing campaign names and average ROAS.

Insights:

- **Festival Offer** and **Category Promotion** lead with ROAS ~3.95–3.96.
- Referral and Email Campaigns perform well too.
- Supports decisions on which campaigns to scale or repeat.

36. Drilling Order Trends by Customer Segment

Purpose:

To show how order counts change for each customer segment over years.

Visual:

Clustered column chart by year and segment (Inactive, New, Premium, Regular).

Insights:

- *Regular* and *New* segments show growth from 2023 to 2024.
- *Inactive* customers reduced slightly — sign of good retention.
- Supports targeting segments with tailored campaigns.

37. Rating

Purpose:

To display selected rating value for filters or scenario checks.

Visual:

Numeric scale or card showing rating value (3 to 5).

Insights:

- Shows customer feedback or rating scale for current filter.
- Used for simulating impact of high vs low ratings.
- Useful for service quality tracking.

38. Emoji-Based Ratings

Purpose:

To show customer product/service ratings using emoji stars.

Visual:

Table with *category*, *Star*, and *rating*.

Insights:

- *Pet Care* category shows average ratings of 3–5 stars.
- Indicates high satisfaction for Pet Care items.
- Supports maintaining product/service standards.

Emoji-Based Ratings		
category	Star	rating
Pet Care	★ ★ ★	3
Pet Care	★ ★ ★ ★	4
Pet Care	★ ★ ★ ★ ★	5

39. Simulated ROAS

Purpose:

To test possible Return on Ad Spend with hypothetical scenarios.

Visual:

KPI card displaying **32.19K** simulated ROAS.

Insights:

- Shows what ROI could look like under adjusted budgets.
- Helps managers decide on budget changes.
- Useful for financial planning and forecasting.

40. Tree Visualization of Product Sales

Purpose:

To break down product sales by category, customer segment, year, month, and day.

Visual:

Tree or Sankey diagram with multiple levels.

Insights:

- *Pet Care* shows 398 total orders, split by segments and dates.
- New segment contributes the most.
- Gives a clear drill-down path for deep analysis.

41. Marketing Budget What-If

Purpose: To simulate budget changes and see impact on metrics.

Visual: Slider bar or input field for budget with adjustable value (e.g. 1,000).

Insights:

- Enables testing how spending more or less affects ROAS.
- Supports better allocation of ad spend.
- Aids scenario-based planning.

42. Category Filter Panel

Purpose:

To let users filter visuals by product categories.

Visual:

Category checklist with options for Baby Care, Snacks, Pet Care, etc.

Insights:

- Enables focused analysis on selected product lines.
- Useful for customized dashboard views.
- Helps compare performance category-wise.

Key Findings

1. Peak Order Months Identified

Highest order volumes were recorded in **August 2023** and **May 2023**, indicating seasonal demand spikes.

2. Delivery Performance is Strong but Needs Improvement

Over **70% of deliveries are on time**, but around **30% experience delays**, mostly slight — suggesting opportunities in route or slot optimization.

3. High-Damage Products Detected

Products like **Toilet Cleaner** and **Detergent** have damage rates over **20%**, indicating issues in packaging or transport.

4. Marketing Campaign ROI is Uneven

Campaigns like **Referral Programs** and **Festival Offers** show high ROAS (~3.9+), while others perform poorly — suggesting a need for **budget reallocation**.

5. High-Value Customers Identified

Some customers, like *Aadhya Cherian*, have **CLV above ₹28,000**, highlighting potential for **premium segmentation and retention strategies**.

Conclusion

Through this analysis, I gained deep insights into **customer behavior**, **delivery operations**, **marketing efficiency**, and **inventory health**. Power BI enabled the consolidation of multiple datasets into a clear, actionable dashboard.

How This Helps in Decision-Making:

- **Operations:** Identify and fix delivery bottlenecks
- **Marketing:** Focus spending on high- ROAS campaigns
- **Inventory:** Reduce product damage and stockouts
- **Customer Management:** Reward loyal customers and improve satisfaction
- **Strategic Planning:** Base decisions on data, not assumptions
